AXIOM PROTOCOL

$100/Week

Capital Deployment Strategy

Building Toward $1,500+ Per Month in Variable Income

USER MANUAL
PREPARED: FEBRUARY 26, 2026
VERSION 1.0

TABLE OF CONTENTS

1. INTRODUCTION & PURPOSE

This manual provides a step-by-step strategy for deploying $100 per week ($433/month, $5,200/year) across Axiom Protocol products to build a portfolio that targets $1,500 or more per month in variable income over a 24-month period.

The strategy uses five income-generating products within the Axiom Protocol ecosystem. Each product carries different risk profiles, time horizons, and income characteristics. By diversifying across all five, the strategy aims to build multiple independent income streams that compound over time.

Total capital deployed over 24 months: $10,400

Target monthly income at Month 24: $1,500+ (variable)

Important: The $1,500/month target is a projection based on variable rates. Actual results will differ based on market conditions, protocol health, participation levels, and the Adaptive Metrics Engine (AME) policy state. There is no guarantee this target will be achieved.

2. PREREQUISITES

A. Web3 Wallet

- Install MetaMask browser extension or mobile app
- Secure your seed phrase offline (never share it)
- Connect to Arbitrum One network (Chain ID: 42161)

B. Initial Funds

- $100 in USDC, ETH, or fiat (for first week)
- Small amount of ETH on Arbitrum One for gas fees (approximately $0.10 per transaction)

C. AXUSD Acquisition

- Several products operate in AXUSD (Axiom's stablecoin)
- Acquire AXUSD through the Peg Stability Module (PSM) by depositing USDC at a 1:1 ratio

D. AXM Token Acquisition

- AXM is the governance token required for staking and DEX liquidity provision
- Acquire AXM through the Axiom Exchange Hub
- AXM price is variable and subject to market conditions

3. AVAILABLE PRODUCTS OVERVIEW

Product 1: AXM Staking

What it does: Lock AXM tokens to earn variable rewards

Variable APY: 12% - 25% (subject to change)

Lock-up: None (flexible withdrawal)

Risk level: Low-moderate (token price volatility)

Product 2: Wealth Practice (Group Economics)

What it does: Rotating savings circles where members contribute weekly/monthly and receive lump-sum payouts

Currency: AXUSD

Cycle: Determined by group size (e.g., 10 members = 10-week cycle)

Risk level: Low (insurance fund covers defaults)

Product 3: DEX Liquidity Provision

What it does: Provide token pairs to Axiom Exchange Hub and earn trading fees

Fee share: 0.3% of trading volume distributed to LPs

Lock-up: None (withdraw anytime)

Risk level: Moderate (impermanent loss exposure)

Product 4: Lending Fund Participation

What it does: Deposit AXUSD into a lending pool that funds short-term bridge loans secured by real property

Variable target rate: 10% - 14% annually

Minimum participation: $100

Risk level: Low-moderate (property-secured)

Product 5: DePIN Node Income

What it does: Operate decentralized infrastructure nodes for storage, compute, and data services

Entry cost: $15 - $40 (smartphone-based starter node)

Risk level: Low (infrastructure service demand)

4. THE $100/WEEK DEPLOYMENT STRATEGY

Weekly allocation of $100 across products:

```
AXM Staking:              $35/week  (35%)
Wealth Practice:           $25/week  (25%)
DEX Liquidity Provision:   $20/week  (20%)
Lending Fund:              $15/week  (15%)
DePIN Node Reserve:         $5/week   (5%)
```

This allocation balances growth potential (staking, DEX) with stability (lending fund, wealth practice) and infrastructure income (DePIN). The allocation shifts over the four phases as your portfolio grows.

Monthly capital deployment: $433

Quarterly capital deployment: $1,300
Annual capital deployment: $5,200

5. PHASE 1: FOUNDATION (MONTHS 1-6)

Objective: Establish positions across all five products. Build reputation in Wealth Practice. Begin earning variable income.

Total capital deployed by end of Phase 1: $2,600

Month 1 — Setup and First Positions

Step 1: Connect wallet to Axiom Protocol platform

Step 2: Convert $50 USDC to AXUSD via the PSM

Step 3: Convert $35 to AXM via the Exchange Hub

Step 4: Deposit $35 worth of AXM into the Staking Hub — navigate to the Staking page, click "Stake AXM", enter amount, confirm. Rewards begin accumulating immediately.

Step 5: Deposit $25 AXUSD into your Wealth Practice wallet — navigate to the Wealth Practice page, browse or create a circle, join a circle with a $100/month contribution.

Step 6: Provide $20 in DEX liquidity — navigate to the Exchange Hub, select a trading pair (e.g., AXM/AXUSD), provide equal value of both tokens, receive LP tokens.

Step 7: Deposit $15 AXUSD into the Lending Fund — navigate to the Lending Fund page, click "Participate", enter amount, confirm.

Step 8: Set aside $5 in DePIN reserve — hold in wallet until $40 accumulated (Week 8).

Weeks 2-4: Continue Weekly Deposits

Each week, repeat the allocation: $35 to AXM Staking, $25 to Wealth Practice, $20 to DEX liquidity, $15 to Lending Fund, $5 to DePIN reserve. Claim staking rewards weekly and restake to compound your position.

Month 1 Checkpoint

```
Capital deployed:                    $400
AXM Staking position:               ~$140
Wealth Practice contributions:       ~$100
DEX Liquidity position:              ~$80
Lending Fund position:               ~$60
DePIN reserve:                       ~$20
Estimated monthly income (variable): ~$2-5
```

Months 2-6: Build and Activate

- Continue $100/week allocation pattern consistently
- Compound all staking rewards weekly (claim and restake)
- Month 4: DePIN reserve reaches ~$80 — purchase a starter node ($15-$40)
- Month 4-5: First Wealth Practice payout may occur depending on circle size
- Redirect any Wealth Practice payout into AXM Staking or Lending Fund for compounding

Phase 1 Checkpoint (End of Month 6)

Total capital deployed:	$2,600
AXM Staking position:	~$950 - $1,050
Wealth Practice contributions:	~$650
DEX Liquidity position:	~$530 - $560
Lending Fund position:	~$400 - $420
DePIN node + reserve:	~$140 - $160
Estimated monthly income (variable):	~$25 - $55

6. PHASE 2: ACCELERATION (MONTHS 7-12)

Objective: Shift from pure accumulation to income generation. Begin reinvesting earned income. Join a second Wealth Practice circle. Upgrade DePIN node tier.

Total capital deployed by end of Phase 2: $5,200

Key Actions (Months 7-12)

- Continue $100/week base allocation
- All earned income (staking rewards, LP fees, lending interest, DePIN earnings) is reinvested: 50% to AXM Staking, 30% to Lending Fund, 20% to DEX Liquidity
- Join a second Wealth Practice circle using a portion of first circle payout
- Upgrade DePIN node to next tier ($100-$250) by Month 9
- By Month 12, each product should be generating measurable income independently

Phase 2 Checkpoint (End of Month 12)

```
Total capital deployed:              $5,200
Total portfolio value:               ~$5,800 - $6,800
AXM Staking position:               ~$2,200 - $2,600
Wealth Practice (2 circles):         ~$1,300 - $1,400
DEX Liquidity position:              ~$1,200 - $1,400
Lending Fund position:               ~$850 - $1,000
DePIN infrastructure:                ~$250 - $400
Estimated monthly income (variable): ~$80 - $170
```

7. PHASE 3: COMPOUNDING (MONTHS 13-18)

Objective: Income from existing positions now meaningfully supplements the $100/week contributions. Total monthly deployment reaches $513-$603/month. Focus on maximizing compound growth.

Key Actions

- Continue $100/week base allocation
- Earned income adds an estimated $80-$170/month in additional deployable capital
- Consider joining a third Wealth Practice circle funded from earned income
- Increase DEX liquidity positions to capture higher fee volume
- Monitor Lending Fund for higher-rate loan opportunities

Phase 3 Checkpoint (End of Month 18)

```
Total capital deployed:              $7,800
Total portfolio value:               ~$9,500 - $12,500
AXM Staking position:               ~$4,000 - $5,200
Wealth Practice (2-3 circles):       ~$2,000 - $2,500
DEX Liquidity position:              ~$1,800 - $2,500
Lending Fund position:               ~$1,200 - $1,700
DePIN infrastructure:                ~$500 - $600
Estimated monthly income (variable): ~$250 - $600
```

8. PHASE 4: INCOME TARGET (MONTHS 19-24)

Objective: Portfolio reaches critical mass where variable income approaches and potentially exceeds $1,500/month. Begin transitioning from full compounding to partial income withdrawal.

Income Extraction Schedule

- Months 19-21: Reinvest 75% of earned income, withdraw 25% as spendable income
- Months 22-24: Reinvest 50% of earned income, withdraw 50% as spendable income

Month 24 Income Breakdown by Product

```
AXM Staking (12-25% APY on ~$6K-$9K):    $60 - $188/mo
DEX Liquidity Fees (on ~$3K-$4.5K):       $30 - $90/mo
Lending Fund (10-14% on ~$2.5K-$3.5K):    $21 - $41/mo
Wealth Practice (3 circles, overlapping):  $200 - $500/mo
DePIN Node Income (mid-tier):              $50 - $150/mo
----------------------------------------------
COMBINED MONTHLY INCOME RANGE (VARIABLE):
  Conservative:  $361/month
  Base case:     $969/month
  Optimistic:    $1,569/month+
```

Beyond Month 24

If you continue the $100/week deployment beyond Month 24 while fully reinvesting earned income, the compounding effect accelerates significantly because earned income exceeds the $100/week base contribution.

```
Month 30 projected income: $800 - $2,200/month
Month 36 projected income: $1,200 - $3,500/month
```

9. INCOME PROJECTION TABLES

All figures are estimates based on variable rates. Actual results will differ.

Conservative Scenario

Staking 12% APY, Lending 10%, Low DEX volume, Slow circles

Month	Deployed	Portfolio	Monthly Income
3	$1,300	$1,320	$3
6	$2,600	$2,700	$25
9	$3,900	$4,200	$50
12	$5,200	$5,900	$80
15	$6,500	$7,800	$140
18	$7,800	$10,000	$250
21	$9,100	$12,500	$361
24	$10,400	$15,200	$500

Base Case Scenario

Staking 18% APY, Lending 12%, Moderate DEX volume, Active circles

Month	Deployed	Portfolio	Monthly Income
3	$1,300	$1,350	$5
6	$2,600	$2,850	$40
9	$3,900	$4,600	$85
12	$5,200	$6,800	$170
15	$6,500	$9,500	$350
18	$7,800	$12,500	$600
21	$9,100	$16,000	$969
24	$10,400	$20,500	$1,500

Optimistic Scenario

Staking 25% APY, Lending 14%, High DEX volume, Multiple circles

Month	Deployed	Portfolio	Monthly Income
3	$1,300	$1,380	$8
6	$2,600	$3,000	$55
9	$3,900	$5,100	$130
12	$5,200	$7,800	$250
15	$6,500	$11,200	$520
18	$7,800	$15,500	$850
21	$9,100	$20,500	$1,350
24	$10,400	$26,000	$2,100+

10. PROBABILITY OF SUCCESS ANALYSIS

"Success" is defined as achieving $1,500/month in variable income. Probability estimates are based on the relationship between required portfolio size and historical rate ranges.

Timeline Probabilities

```
$500/month income:
  Conservative: Month 21-24   Base: Month 15-18   Optimistic: Month 12-15
  Probability by Month 18: 60-70%
$1,000/month income:
  Conservative: Month 30+     Base: Month 21-24   Optimistic: Month 18-21
  Probability by Month 24: 45-55%
$1,500/month income:
  Conservative: Month 36+     Base: Month 24-30   Optimistic: Month 21-24
  Probability by Month 24: 35-45%
  Probability by Month 36: 70-80%
```

Factors That Increase Probability

- Consistent $100/week deposits with no missed weeks
- Disciplined compounding (reinvesting all income through Month 18)
- Joining multiple Wealth Practice circles with overlapping payout schedules
- Active participation in high-volume DEX pools
- Upgrading DePIN nodes to higher-earning tiers
- AXM token price appreciation
- Favorable AME policy state (NORMAL mode allows full yield distribution)

Factors That Decrease Probability

- Missed weekly contributions
- Withdrawing income before Month 19
- AXM token price decline
- Low DEX trading volume
- AME defensive or emergency mode (suppresses yield)
- Wealth Practice circle defaults (mitigated by insurance fund)

Requirements for $1,500/Month by Month 24

The most reliable path requires all of the following:

- Zero missed weekly contributions
- Full compounding through Month 18 (no withdrawals)
- At least 3 active Wealth Practice circles by Month 12
- AXM staking APY averaging 18%+ over the period
- At least one mid-tier DePIN node by Month 9

11. RISK FACTORS & MITIGATION

AXM token price decline

Impact: Reduces dollar value of staking position and rewards

Mitigation: Diversification across AXUSD-denominated products provides stability. Continue buying during dips to lower average cost.

Smart contract vulnerability

Impact: Potential loss of deposited funds

Mitigation: Axiom Protocol uses verified contracts on Arbitrum One. Spread capital across multiple products to limit single-contract exposure.

DEX impermanent loss

Impact: LP position value decreases relative to holding tokens

Mitigation: Limit DEX allocation to 20% of portfolio. Choose stable pairs (AXM/AXUSD) to minimize divergence.

Lending Fund borrower default

Impact: Delayed or reduced interest payments

Mitigation: All loans secured by real property at maximum 70% LTV. Default recovery through property liquidation.

Wealth Practice member default

Impact: Delayed payout to remaining circle members

Mitigation: Insurance fund (funded by 5% of DePIN node rewards) covers shortfalls. AxiomScore system filters unreliable participants.

AME policy mode change

Impact: Yield distribution may be reduced or suspended during defensive modes

Mitigation: This is a protective mechanism preserving protocol health. Income resumes when stability is restored.

Missed contributions

Impact: Delays compounding and extends timeline

Mitigation: Set up a recurring weekly reminder. Partial contributions are better than skipping entirely.

12. FREQUENTLY ASKED QUESTIONS

Q: Can I start with less than $100/week?

A: Yes. The strategy scales linearly. At $50/week, expect the same income targets to take approximately 36-48 months instead of 24 months. The allocation percentages remain the same.

Q: Can I start with more than $100/week?

A: Yes. At $200/week, the timeline compresses significantly. The $1,500/month target becomes achievable in approximately 12-18 months under base case conditions.

Q: What if I miss a week?

A: Resume the following week with the normal $100 allocation. Do not try to "catch up" by doubling. Consistency matters more than any single contribution.

Q: When should I start withdrawing income?

A: The strategy recommends full reinvestment through Month 18 and partial withdrawal (25-50%) from Month 19 onward. Early withdrawal significantly delays reaching the income target.

Q: What happens during an AME hard brake event?

A: Yield distribution is temporarily suspended to protect protocol solvency. Your positions remain intact. Income resumes after 3 consecutive safe stability snapshots.

Q: Is my capital locked?

A: Staking, DEX liquidity, and DePIN nodes have no mandatory lock-up. You can withdraw at any time. Wealth Practice contributions follow the circle schedule. Lending Fund participation follows the fund terms.

Q: What fees should I expect?

A: Arbitrum One gas fees are approximately $0.05-$0.20 per transaction. Batch your weekly deployments into a single session to minimize total gas costs.

13. GLOSSARY OF TERMS

AME — Adaptive Metrics Engine — the deterministic financial computation engine governing protocol policy mode, yield distribution, and risk controls.

APY — Annual Percentage Yield — the annualized rate of return accounting for compounding. All APY figures are variable.

AXUSD — Axiom Protocol's stablecoin, designed to maintain a 1:1 peg with USD via the Peg Stability Module.

AXM — Axiom Protocol governance token used for staking, governance voting, DEX liquidity, and protocol participation.

AxiomScore — On-chain reputation score (300-850) tracking participation reliability in Wealth Practice circles.

DePIN — Decentralized Physical Infrastructure Network — physical nodes providing storage, compute, and data services.

Hard Brake — Automated safety mechanism that suspends yield distribution when critical stability thresholds are breached.

Impermanent Loss — Temporary reduction in LP position value compared to holding tokens, caused by price divergence.

PSM — Peg Stability Module — mechanism for minting/redeeming AXUSD at 1:1 ratio with USDC.

Stability Score — Composite score (0-100) measuring protocol health. Scores above 75 indicate STABLE band.

Wealth Practice — Group economics product based on rotating savings circles (ROSCA/SUSU).

Build Wealth Together, On-Chain.
